

API

API is a software interface for interacting with information systems of merchants that use IPS Assist electronic payment system in settlements with customers.

The interface supports functions such as making a payment, canceling a payment, refunding money, confirming payments, and others.

Parameters are passed by the POST method in the request body in the "key=value" format, by a SOAP request, or in the JSON format.

The choice of parameter passing format is determined on the client side and controlled by passing the *Format* parameter.

The description of the parameters of the IPS Assist web services for the JSON format is contained in the swagger file at the address <https://docs.belassist.by/swagger/>

Attention!

The following root certificates have to be installed on the requester side in the Trusted Root Certification Authorities Store for correct work with WEB-services via secure communication over TLS:

- root certificates GlobalSign (<https://www.globalsign.com/repository/ca-certificates/>):
 - GlobalSign Root R3;
 - GlobalSign ECC Root R5;
 - GlobalSign Root R6.
- root certificates Sectigo (<https://www.sectigo.com/knowledge-base/detail/Sectigo-Root-Certificates/KA03I000000c4KV>):
 - USERTrust RSA Certification Authority;
 - USERTrust ECC Certification Authority.

Before to start, check the presence of these certificates in the trust store and add it if necessary.
